Assignment # 2: Elicitation Report & User Stories

Team Members

Hassan Naveed 22i-0557

Rubban Iftikhar 22i-2466

Amna Noor 22i-1529

Section: SE (F)

User Stories:

ID#	User Story	Acceptance Criteria
1.	As a new user, I want to access a Signup Page protected by Google Recaptcha so that I can create a secure account and prevent bots from spamming the system.	1. The Signup Page must include a Google Recaptcha element to prevent bots and spam. 2. Users should be able to enter their email address, username, password, and other required information. 3. Upon successful registration, users should receive a confirmation email. 4. If the user enters incomplete or incorrect information, an error message should be displayed, guiding them to provide the necessary details.
2.	As a registered user, I want a Login Page with options for entering my username and password so that I can access the system securely.	1. The Login Page should provide input fields for username and password. 2. Users should be able to log in successfully with valid credentials. 3. If the user enters incorrect credentials, an error message should be displayed. 4. Users should have the option to reset their password via a "Forgot Password" link.
3.	As a patient, I want a central Dashboard displaying essential information and providing quick access to various app functionalities so that I can easily navigate.	1. The Dashboard should display essential information such as appointment reminders, order status, and user notifications. 2. Users should be able to access various app functionalities directly from the Dashboard. 3. The Dashboard should be responsive and adapt to different screen sizes.
4.	As a patient, I want the ability to schedule appointments with my preferred healthcare providers through the app so that I can conveniently manage my healthcare appointments.	1. The app should provide a user-friendly interface to schedule appointments with healthcare providers. 2. Users should be able to search for healthcare providers by name, specialty, or location. 3. If user enter any special symbols (other than alphabets, e.g., @), it should display error message: "Search input cannot contain special symbols." 4. When scheduling an appointment, users should be able to select the date and time

		from available slots. 5. Users should receive a confirmation email with the appointment details after scheduling. 6. Users should be able to view and manage their upcoming appointments within the app. 7. The app should allow users to cancel or reschedule appointments if needed, with proper notifications. 8. Healthcare providers should have access to a corresponding interface to view their appointment schedules. 10. The app should consider time zone differences when scheduling appointments for users in different locations.
5.	As a patient, I want to receive automated appointment reminders and notifications through the app, so that I can stay informed and ensure I don't miss any important healthcare appointments.	1. Users should have the option to enable or disable automated appointment reminders and notifications in the app's settings. 2. Automated reminders should be sent to users a specified time before their scheduled appointments (e.g., 24 hours or 1 hour before). 3. The reminders and notifications should be sent through push notifications, email, or SMS, based on user preferences. 4. The reminders and notifications should include essential information about the appointment, such as date, time, location, and healthcare provider details. 5. Users should receive a reminder for each upcoming appointment in their schedule. 6. Users should receive a notification if there is any change or cancellation of an appointment by the healthcare provider. 7. The app should allow users to confirm or acknowledge the reminders and notifications to ensure they have received and seen the information.
6.	As a patient, I want the ability to easily upload and store my medical documents and reports within the app, so I can access and share them with healthcare professionals whenever necessary.	1. The app should provide a dedicated section for users to upload and manage their medical documents and reports. 2. Users should be able to upload documents in various file formats, such as PDF, images, or Word documents. 3. Uploaded documents should be securely

		stored and associated with the user's account. 4. Users should have the option to categorize and label their uploaded documents for easy organization. 5. Users should be able to share specific documents with their chosen healthcare professionals securely. 6. The app should offer a user-friendly and intuitive interface for uploading, viewing, and managing medical documents. 7. Uploaded documents should be accessible to the user whenever necessary, both from mobile and desktop devices.
7.	As a patient, I want the option to provide feedback on my experiences with the app, so that it can help to improve the services and enhance the overall user experience.	1. The app should feature a feedback section where users can submit feedback, comments, or suggestions. 2. Users should be able to access the feedback section from the app's main menu or settings. 3. The feedback submission form should include fields for users to enter their comments and suggestions. 4. Users should have the option to rate their experiences on a scale (e.g., 1 to 5 stars). 5. Submitted feedback should be recorded and stored for analysis by the app's development and improvement teams. 6. Users should receive a confirmation message after submitting feedback. 7. The app should consider user feedback for service improvements, updates, and enhancements to the overall user experience.
8.	As a patient, I want access to a support system and a help center within the app so that I can easily seek assistance and guidance in case I encounter issues or have questions.	1. The app should provide a dedicated support system and a help center accessible from the main menu or settings. 2. Users should have the option to contact support through various channels, including live chat, email, or a support ticket system. 3. The help center should include a comprehensive knowledge base with frequently asked questions (FAQs), user guides, and troubleshooting resources. 4. Users should be able to search for specific topics or issues within the help

		center. 5. Support requests and inquiries submitted by users should be tracked and assigned to appropriate support staff. 6. Users should receive timely responses and resolutions to their support inquiries. 7. The app should have a user-friendly interface for submitting support requests or accessing the help center.
9.	As a patient, I want the ability to place orders for medicines and healthcare products through the app, making it convenient to access the items I need for my health.	1. The app should feature a user-friendly interface for browsing and selecting medicines and healthcare products. 2. Users should be able to search for specific items by name, category. 3. Users should be able to add items to their shopping cart and review the cart before placing an order. 4. The app should provide detailed information about each product, including price, quantity, and descriptions. 5. Users should have the option to select a delivery address and payment method during the ordering process. 6. The app should support secure payment methods for processing orders. 7. Users should receive an order confirmation email after successfully placing an order.
10.	As a patient, I want the option to cancel orders that I've placed, providing flexibility in case I no longer require the items or medications.	1. Users should have access to a section within the app to view and manage their placed orders. 2. For each order, there should be an option to cancel the order if it has not yet been shipped. 3. The app should provide a clear and user-friendly process for order cancellation. 4. When a user cancels an order, a confirmation message should be displayed to confirm the cancellation. 5. Cancelled orders should be marked as "Cancelled" in the order history for user reference. 6. Users should receive an email notification confirming the order cancellation.

11.	As a patient, I want to be able to track the status and progress of my orders, so that I can stay informed about the delivery and availability of my healthcare products.	1. Users should have access to a dedicated order tracking feature within the app. 2. The order tracking feature should display the current status of each placed order, such as "Processing," "Shipped," or "Delivered." 3. The order tracking information should be updated in real-time and accessible to the user. 4.. The order tracking feature should provide detailed information about the estimated delivery date and the shipping carrier for each order. 5. Users should be able to click on individual orders within the order tracking feature to view more detailed information about each order.
12.	As a patient, I want the ability to receive proactive notifications or alerts when there are updates or changes to the status of my orders, such as when my order is out for delivery or if there are any issues with the shipment, ensuring that I am always well-informed about the progress of my orders.	1. Users should receive proactive notifications or alerts for updates on the status of their orders. 2. Notifications should be triggered when there are changes in the order status, such as when an order is out for delivery or if there are issues with the shipment. 3. Users should receive notifications through multiple channels, including push notifications, email, or SMS, based on their preferences. 4. Notifications should include essential details about the order, such as the current status, estimated delivery time, and any issues or delays. 5. Users should have the option to confirm or acknowledge the notifications, indicating they have received and seen the information. 6. Users should be able to customize notification preferences in the app's settings, including the types of notifications they wish to receive.
13.	As a patient, I expect to receive timely alerts and notifications for appointments, and other relevant updates to keep me informed about important events and activities within the app.	1. Users should receive timely alerts and notifications for upcoming appointments, including date, time, location, and healthcare provider details. 2. Users should receive notifications for other relevant updates, such as changes in appointment times or cancellations.

		3. Notifications should be sent through push notifications, email, or SMS, based on user preferences. 4. Users should have the ability to customize their notification preferences in the app, allowing them to choose which types of notifications they wish to receive. 5. Notifications for appointments should be sent a specified time before the scheduled appointment (e.g., 24 hours or 1 hour before). 6. Users should receive notifications for any important events within the app, such as changes to their medical records or order status. 7. Users should have the option to confirm or acknowledge the notifications, ensuring they have received and seen the information.
14.	As a patient, I want the option to personalize my notification preferences, allowing me to choose which types of notifications I receive and the method of delivery (e.g., push notifications, emails, or SMS), so that I can stay informed in a way that best suits my needs and preferences.	1. The app should provide a dedicated notification preferences section in the user settings. 2. Users should be able to customize their notification preferences by selecting the types of notifications they wish to receive (e.g., appointment reminders, order updates, or app news). 3. Users should be able to choose the method of delivery for notifications, including push notifications, emails, or SMS. 4. Users should be able to enable or disable specific notification types, ensuring they receive only the most relevant notifications. 5. The app should save and apply the user's notification preferences for future alerts and notifications. 6. Users should receive a confirmation message after updating their notification preferences. 7. The notification preferences section should be easily accessible and user-friendly.
15.	As a patient, I want to see the available time slots for booking appointments with doctors, making it easier for me to	1. The app should provide a section or feature for users to browse and select available time slots for booking

	select a suitable time for my medical appointments.	appointments with doctors. 2. Users should be able to filter and search for available time slots by healthcare provider, specialty, or location. 3. Time slots should be displayed in a clear and organized manner, including date, time, and healthcare provider details. 4. Users should be able to view the availability of time slots for the near future and beyond. 5. Time slots should be updated in real-time to prevent double booking or scheduling conflicts. 6. Users should have the ability to select and reserve a time slot for their medical appointments. 7. The app should consider time zone differences when displaying available time slots for users in different locations. 8. Users should receive a confirmation and details of the booked appointment after selecting a time slot.
16.	As a patient, I want the app to generate a detailed invoice for the services I've availed, appointments I've attended, or medicines I've purchased, ensuring transparency in billing.	1. The app should automatically generate an invoice for services availed, appointments attended, and medicines purchased by the patient. 2. The invoice should include a detailed breakdown of charges, including the cost of individual services, appointments, and medicines. 3. The invoice should be accessible to the patient through the app and include an invoice number for reference. 4. Invoices should be available for review and download from the patient's account. 5. The invoice should display the billing date and the patient's contact information. 6. The app should support different payment methods for settling the invoice, such as credit card or digital wallets. 7. Invoices should be archived for future reference and accessible to the patient's healthcare providers if needed.
17.	As a patient, I want the app to allow me to review and verify the generated bill for accuracy before finalizing it, seek	1. Patients should have the option to review and verify the generated bill before finalizing payment.

	clarification on specific charges, so that I can have confidence in the transparency and accuracy of my billing information.	2. The app should provide a detailed view of the bill, allowing the patient to examine individual line items, charges, and service descriptions. 3. If a patient has questions or concerns about specific charges, they should be able to seek clarification or dispute the charges directly through the app. 4. The app should provide a communication channel, such as live chat or email, for patients to inquire about billing details. 5. Patients should receive timely responses and resolutions to their billing inquiries or disputes. 6. The app should allow patients to confirm the accuracy of the bill after reviewing it, and only then should the payment be processed. 7. Patients should be able to print or download the finalized bill for their records. 8. The app should include a confirmation message after the patient has successfully verified and confirmed the accuracy of the bill.
18.	As a patient, I want the option for urgent online consultations with healthcare professionals in case of emergencies, providing immediate access to medical advice when needed.	1. The app should provide a dedicated feature for urgent online consultations with healthcare professionals, accessible in case of emergencies. 2. Users should be able to initiate an urgent consultation with a healthcare professional outside of regular appointment hours. 3. The feature should ensure quick and efficient access to medical advice and guidance. 4. Users should have access to a directory of available healthcare professionals for urgent consultations. 5. The app should provide information about the availability and specialization of healthcare professionals offering urgent consultations. 6. Users should have the option to select a healthcare professional based on their specific medical needs. 7. The app should facilitate the scheduling of immediate consultations or provide

		options for on-demand consultations.
19.	As a patient, I want the emergency online doctor consultation feature to have a built-in chat functionality so that I can quickly describe my symptoms and receive preliminary advice before initiating a video or audio consultation, ensuring a more efficient and tailored response to my emergency.	1. The emergency online doctor consultation feature should include a built-in chat functionality for users to quickly describe their symptoms. 2. Users should be able to access the chat functionality before initiating a video or audio consultation for preliminary advice. 3. The chat functionality should be user-friendly and support real-time communication with healthcare professionals. 4. Users should be able to enter their symptoms and receive responses from the healthcare professional within a reasonable time frame. 5. The chat functionality should allow for the exchange of text, images, and other relevant information to describe the symptoms effectively. 6. The chat functionality should be designed for efficiency and a rapid response to the patient's emergency. 7. Users should have the option to seamlessly transition from the chat to a video or audio consultation if deemed necessary by the healthcare professional.
20.	As a patient, I want the app to offer analytics charts that display my usage history and demographics so that it can provide insights into my health-related patterns and help me to make informed decisions.	1. The app should provide a section with analytics charts that display a patient's usage history and demographics. 2. Users should be able to access these charts from their account or profile settings. 3. Analytics charts should include information about the frequency of appointments, medication adherence, and other relevant health-related data. 4. The app should offer demographics charts, including age, gender, and location information for the patient. 5. Charts should be user-friendly and easy to interpret, using clear visual representations. 6. Users should have the option to view historical trends and patterns in their health data. 7. The app should provide explanations or

		insights related to the displayed charts, helping patients understand their health patterns. 8. Patients should be able to use the insights gained from these charts to make informed decisions about their health and wellness.
21.	As a patient, I expect the app to utilize artificial intelligence to assist in diagnosing health conditions based on my medical records, so that it can potentially aid in early detection and treatment.	1. The app should feature an AI-based diagnostic tool that utilizes a patient's medical records for health condition analysis. 2. Patients should be able to grant the app permission to access and analyze their medical records. 3. The AI-based diagnostic tool should use the patient's medical history to provide potential health condition assessments. 4. The app should display the diagnostic results, including potential health conditions, to the patient. 5. Patients should have the option to receive recommendations or next steps based on the diagnostic results. 6. The app should clarify that the AI-based diagnosis is not a substitute for professional medical advice and that users should consult with healthcare professionals for a conclusive diagnosis and treatment. 7. The diagnostic tool should prioritize privacy and data security, ensuring the protection of the patient's medical records. 8. The app should provide a user-friendly interface for patients to interact with the AI-based diagnostic tool.
22.	As a patient, I expect the app to prioritize the security and privacy of my medical records when using AI for diagnostics, ensuring that my personal health information remains confidential and complies with all relevant data protection regulations and standards.	1. The app should implement robust security measures to protect the confidentiality and privacy of patient medical records. 2. The app should utilize encryption protocols to secure the transmission and storage of medical data used for AI diagnostics. 3. Users should be informed about the app's data protection practices and should have the option to review the app's privacy policy. 4. Patients should have the ability to grant

		or revoke permission for the app to access and use their medical records for AI diagnostics.
23.	As a patient, I want to receive a weekly newsletter from the app with healthcare updates, tips, and relevant information, enhancing my knowledge and promoting overall well-being.	1. The app should offer a weekly newsletter feature that patients can opt in to receive. 2. Patients should have the option to select their newsletter preferences, such as topics of interest or preferred language. 3. The newsletter should be delivered to the patient's registered email address or in-app notifications, based on user preferences. 4. The content of the newsletter should include healthcare updates, tips, and relevant information to promote overall well-being. 5. The app should ensure that the newsletter content is accurate, evidence-based, and from reputable sources. 6. Patients should have the option to unsubscribe from the newsletter at any time if they no longer wish to receive it. 7. The newsletter should be user-friendly, with a clear layout and easy navigation.
24.	As a patient, I want the app to integrate with my wearable health devices, such as fitness trackers and smartwatches, so that my health data is automatically synchronized, providing a comprehensive view of my well-being.	1. The app should support integration with a variety of wearable health devices commonly used by patients, including fitness trackers and smartwatches. 2. Patients should have the ability to connect and sync their wearable devices with the app. 3. The integration should allow for the automatic collection of health data, including steps, heart rate, sleep patterns, and other relevant metrics. 4. The app should display the synchronized data in an organized and user-friendly format within the patient's profile or dashboard. 5. Patients should be able to track and monitor their health trends over time, allowing for better self-management. 6. The app should ensure that data from wearable devices is securely stored and protected in compliance with data protection regulations.

25.	As a patient, I want to receive confirmation emails from the app for appointments, orders, and other significant actions I take within the system, so that I have a record of my interactions.	1. The app should automatically send confirmation emails to patients for various actions, including appointment bookings, order placements, and other significant interactions. 2. Confirmation emails should be sent to the email address associated with the patient's account. 3. Confirmation emails should include details of the specific action, such as appointment date and time, order summary, or description of the action taken. 4. The content of confirmation emails should be clear, concise, and easily understandable. 5. Patients should receive confirmation emails immediately after successfully booking an appointment, placing an order, or taking other significant actions within the app. 6. Confirmation emails should be logged in the patient's email inbox for future reference.
26.	As a hospital administrator, I want to access patients' queries regarding their appointments or other issues so that I can answer them accurately and timely.	1. The app should provide a dedicated interface for hospital administrators to access and manage patient queries. 2. Hospital administrators should be able to view patient queries related to appointments, scheduling, or any other issues. 3. The interface should display patient queries in an organized manner, showing the date, patient name, and the content of the query. 4. Hospital administrators should be able to respond to patient queries directly through the app. 5. The app should support notifications to alert hospital administrators about new patient queries or responses. 6. Patient query responses should be sent to the respective patients in a timely and accurate manner. 7. The interface should allow for tracking the status and resolution of patient queries. 8. The app should include a search and

		filter function for hospital administrators to find specific patient queries or topics.
27.	As a hospital administrator, I need access to a dedicated portal within the app to oversee and manage doctor availability, so that I can make it possible to add, remove, or modify doctor profiles and their respective schedules.	1. The app should provide a dedicated portal or interface for hospital administrators to manage doctor availability. 2. Hospital administrators should have the ability to add new doctor profiles, including their details, specialties, and contact information. 3. The portal should allow for the removal or modification of existing doctor profiles as needed. 4. Hospital administrators should be able to view and manage the schedules of doctors, including their availability for appointments. 5. The app should allow administrators to add or modify time slots for doctors, mark their availability, or adjust their schedules in real-time. 6. The portal should provide options for viewing and managing recurring schedules for doctors with regular availability patterns. 7. Changes made to doctor profiles or schedules should be immediately reflected in the app, ensuring accurate availability for patients. 8. Hospital administrators should have access to historical records of doctor profiles and schedules for reference. 9. The portal should be user-friendly and include features for efficient profile and schedule management.
28.	As a healthcare provider, I want to implement a virtual waiting room feature in the app to facilitate a smoother and more organized patient check-in process.	1. The app should offer a virtual waiting room feature accessible to both healthcare providers and patients. 2. Patients should receive a notification or alert when it's time for their appointment and they should enter the virtual waiting room. 3. Healthcare providers should have the ability to see a list of patients in the virtual waiting room and their respective appointment times.

		4. The virtual waiting room should allow for easy communication between healthcare providers and patients through text, audio, or video chat while patients wait for their appointments. 5. Patients should be able to check their estimated wait time in the virtual waiting room. 6. The virtual waiting room should prioritize privacy and confidentiality of patient information.
29.	As a doctor, I want the ability to set and update my availability schedule within the app, indicating when I am free to accept appointments, so that I have accurate slot availability for patients to book.	1. The app should provide a user-friendly interface for doctors to set and update their availability schedules. 2. Doctors should be able to specify their availability for appointments by selecting specific time slots, days, and duration. 3. The app should allow doctors to mark their availability in advance, ensuring that patients can book appointments with sufficient notice. 4. Doctors should have the flexibility to update their availability in real-time, indicating any changes or cancellations. 5. The app should support recurring schedules for doctors with regular availability patterns 6. Doctors should be able to view and manage their availability through the app's dashboard or settings. 7. The availability schedule should be synchronized with the app's appointment booking system, ensuring that patients can only book appointments during available time slots. 8. The app should provide a notification or alert system to inform doctors of new appointment bookings and changes in their availability.
30.	As a doctor, I want to keep an online interaction through chat functionality with my patient, so that in case of emergency patients can tell me their symptoms and I can suggest them medication by initiating video or audio	1. The app should provide a chat functionality that allows doctors to interact with patients in real-time. 2. Doctors should be able to initiate chat conversations with patients, and patients should also be able to start chats with doctors.

	consultation.	3. Chat functionality should be accessible through both mobile and web versions of the app. 4. Patients should be able to describe their symptoms through chat and receive preliminary advice from the doctor. 5. If necessary, the chat should provide an option to seamlessly transition to a video or audio consultation for more in-depth interaction. 6. The chat should support text, image, and file sharing for effective symptom description. 7. Both doctors and patients should have the option to end the chat when the interaction is complete.
31.	As a doctor or administrator, I should be able to update slot availability in real-time to account for any unexpected schedule changes, so that patients are aware of any newly available or canceled slots.	1. The app should allow doctors and administrators to update the slot availability for appointments in real-time. 2. Doctors and administrators should be able to add new available slots or cancel existing slots as needed. 3. The app should ensure that any changes made to slot availability are immediately reflected in the app, preventing patients from booking slots that are no longer available. 4. Slot availability updates should be communicated to patients through the app, ensuring they are aware of any newly available slots. 5. The slot availability management interface should be user-friendly, allowing for efficient updates.
32.	As a doctor, I want a user-friendly dashboard to manage and view my appointment schedule, so that it allows me to make adjustments, reschedule, or cancel appointments as needed.	1. The app should provide doctors with a user-friendly dashboard to manage and view their appointment schedules. 2. The dashboard should display a clear and organized list of upcoming appointments, including date, time, patient details, and reason for the appointment. 3. Doctors should have the ability to make adjustments to their appointment schedule, such as rescheduling or canceling appointments, directly from the dashboard. 4. The dashboard should provide an

		intuitive interface for doctors to view and navigate their appointment schedule efficiently. 5. Doctors should be able to filter and search for specific appointments based on patient name, date, or appointment type. 6. The app should support real-time updates, ensuring that any changes made to the appointment schedule are immediately reflected in the dashboard. 7. Doctors should have access to a historical record of past appointments for reference. 8. The dashboard should be accessible through the app's user interface and user account settings.
33.	As a doctor, I want to receive automated appointment reminders through the app, so I don't miss any scheduled appointments with patients.	1. The app should automatically send appointment reminders to doctors before the scheduled appointment times. 2. Appointment reminders should be sent through multiple channels, such as push notifications, emails, or SMS, based on the doctor's preferences. 3. Reminders should include details of the upcoming appointment, such as patient name, appointment date, and time. 4. Doctors should receive appointment reminders in advance of the appointment time to ensure they are well-prepared. 5. The app should provide options for doctors to customize their reminder preferences, allowing them to choose their preferred notification method and lead time.
