Name: [Amna Noor] Roll No: [i22-1529]

Name: [Rubban Iftikhar] Roll No: [i22-2466]

Section: [SE-F]

Use case Template #1

Section	Content
Designation	UC-04
Name	Appointment Booking
Authors	Amna Noor, Hassan Naveed, Rubban Iftikhar
Priority	Importance for system success: high Technological risk: medium
Criticality	high
Description	Allows users to schedule appointments with their chosen healthcare providers conveniently.
Triger Event	User initiates the appointment booking process through the application.
Actors	Patients, healthcare providers
Pre-Condition	1. The user must be logged into the application. 2. The user must have selected a healthcare provider.
Post-Condition	The appointment is successfully booked and confirmed.
Result	The user receives a confirmation of the booked appointment. The healthcare provider's schedule is updated with the new appointment.
Main Scenario	1. System shows names of healthcare providers with their specializations. 2. User selects the healthcare provider. 3. User chooses a preferred date and time for the appointment. 4. System checks for the availability of the selected healthcare provider at the chosen date and time. 5. If available, the system confirms the appointment. System sends confirmation mails to both the user and the healthcare provider.
Alternative Scenario	If the selected healthcare provider is not available at the chosen date and time, the system suggests alternative slots or providers based on availability.
Exception Scenario	a. User is unable to successfully login the system. b. If there is a system error or failure during the booking process, the user is notified, and the process is halted. The user can retry the booking after resolving the issue.

Qualities	QR: 1 (Usability for user-friendly experience) QR: 2 (Reliability upon appointment schedules and minimizing errors) QR: 3 (Security for patients' data) QR = Quality Requirement

Use case Template #2

Section	Content
Designation	UC-06
Name	Uploading Documents/Medical Reports
Authors	Amna Noor, Hassan Naveed, Rubban Iftikhar
Priority	medium
Criticality	high
Description	Facilitates the upload and storage of medical documents and reports for easy access and sharing with healthcare professionals..
Triger Event	User initiates the document upload process through the application.
Actors	Patients, healthcare professionals
Pre-Condition	1. The user must be logged into the application. 2. The user has relevant medical documents or reports to upload.
Post-Condition	1. The uploaded documents are securely stored in the user's account. 2. Healthcare professionals can access the shared documents.
Result	1. The user receives a confirmation of successful document upload. 2. Healthcare professionals can review and access the uploaded medical documents.
Main Scenario	1. User selects the "Upload Documents" feature within the application. 2. System asks user to pick required documents from device storage. 3. User chooses the medical documents or reports to upload from their device. 4. System validates the document format and checks for any errors. 5. If valid, the system securely stores the documents in the user's account. 6. User receives a confirmation of successful upload.
Alternative Scenario	If the document format is not valid or there are errors, the system provides

	feedback to the user, guiding them on the correct format or resolving any issues.
Exception Scenario	a. User is unable to successfully login the system. b. If there is a system error during the document upload process, the user is notified, and the upload is halted. The user can retry the upload after resolving the issue.
Qualities	QR: 1 (Usability for intuitive interface to easily document upload) QR: 2 (Reliability upon secure and error-free storage of medical documents) QR: 3 (Security for patients' data) QR: 4 (Performance to handle the upload and storage of various document formats efficiently) QR = Quality Requirement

Use case Template #3

Section	Content
Designation	UC-07
Name	Appointment Record and Tracking
Authors	Amna Noor, Hassan Naveed, Rubban Iftikhar
Priority	Low
Criticality	Medium
Description	The Appointment History feature provides users with a comprehensive record of past and upcoming appointments within the application.
Triger Event	User accesses the "Appointment History" section in the application.
Actors	Patients
Pre-Condition	The user must be logged into the application.
Post-Condition	The user has access to a detailed record of past and upcoming appointments.
Result	The user can review, track, and manage their appointment history conveniently.
Main Scenario	1. User navigates to the "Appointment History" section in the application. 2. System retrieves and displays a list of past and upcoming appointments for the user. 3. Each entry in the list includes relevant details such as date, time, healthcare provider, and appointment status. 4. User clicks on individual entries to

	view additional details or make notes.
Alternative Scenario	If there are no past or upcoming appointments, the system notifies the user and provides relevant guidance or suggestions.
Exception Scenario	User is unable to log in application successfully. System is not responding.
Qualities	QR: 1 (Usability for user-friendly interface for easy navigation and reference.) QR: 2 (Reliability upon accurate information about past and upcoming appointments.) QR: 3 (Security for patients' data) QR = Quality Requirement

Use case Template #4

Section	Content
Designation	UC-03
Name	Place Orders
Authors	Amna Noor, Hassan Naveed, Rubban Iftikhar
Priority	high
Criticality	high
Description	The "Place Orders" feature enables users to order medicines and healthcare products through the app, facilitating a convenient and streamlined process for acquiring necessary items.
Triger Event	User selects the "Place Order" option within the app.
Actors	User, System, Inventory Database, Payment Gateway
Pre-Condition	1. User is authenticated and has access to the ordering functionality. 2. User has selected the desired items to be added to the order.
Post-Condition	1. Order details are stored in the system. 2. Inventory is updated to reflect the purchased items. 3. Payment is processed successfully.
Result	User receives confirmation of the placed order, and the ordered items are prepared for delivery.
Main Scenario	1. User navigates to the "Place Order" section. 2. System displays a catalog of available medicines and healthcare products.

	3. User selects desired items and adds them to the order. 4. User reviews the order and proceeds to checkout. 5. System validates the order details. 6. User provides necessary shipping information. 7. User selects a payment method. 8. Payment gateway processes the payment. 9. System updates inventory to reflect the purchased items. 10. User receives an order confirmation with expected delivery details.
Alternative Scenario	If the selected items are out of stock: 1. System notifies the user about the unavailability. 2. User removes or replaces the out-of-stock items.
Exception Scenario	If payment processing fails: 1. User receives an error message. 2. System prompts the user to retry or choose an alternative payment method.
Qualities	Security: Ensures secure handling of user data and payment information. Reliability: Guarantees accurate inventory management and order processing. Usability: Provides a user-friendly and intuitive ordering interface. Performance: Efficiently processes orders and updates inventory in real-time.

Use case Template #5

Section	Content
Designation	UC-08
Name	User Dashboard
Authors	Amna Noor, Hassan Naveed, Rubban Iftikhar
Priority	high
Criticality	high
Description	The Dashboard serves as a central interface within the Health Monitoring and Reporting app, providing users with essential information and quick access to various functionalities for a seamless user experience.
Triger Event	User successfully logs into the app or

	accesses the Dashboard from any section within the app.
Actors	Patients, healthcare professionals, System
Pre-Condition	User is authenticated and has access to the app.
Post-Condition	User is presented with the Dashboard, displaying relevant information and available functionalities.
Result	User gains a comprehensive overview of essential data and easy access to app features.
Main Scenario	1. User logs into the app. 2. System validates user credentials. 3. Upon successful validation, the system redirects the user to the Dashboard. 4. Dashboard displays key health metrics, summaries, or relevant information. 5. Quick access buttons or links are available for various app functionalities. 6. User interacts with the Dashboard to access specific features or view detailed information.
Alternative Scenario	If there is no data to display on the Dashboard: 1. System displays a message indicating the absence of data. 2. User is guided to relevant sections for data input or synchronization.
Exception Scenario	If there is a technical issue preventing the Dashboard from loading: 1. User receives an error message. 2. System logs the error for further investigation.
Qualities	User-Friendly: Provides an intuitive and visually appealing interface. Accessibility: Ensures information is presented in a clear and understandable manner. Responsiveness: Adapts to different screen sizes and resolutions. Performance: Loads quickly, even with a significant amount of data.
