Defect ID:	31
Severity:	Medium

Description

When adding a product in the admin panel, the system accepts non-numerical values (e.g., text, special characters) for the `Product ID` field, allowing the product to be added successfully without validation. This leads to potential data inconsistency or errors in product management.

Steps to Reproduce:

- Log in to the **admin panel** with the credentials:
 - Email: kashaf@gmail.com
 - Password: 12345678.
- Navigate to the **Products** page from the sidebar.
- Click on the **Add Product** button.
- Fill in the following product details:
 - Product ID: #\$\$#%
 - Product Name: Test
 - Product Price: 200
 - Category: Jewelry, Eyeliner
 - Local: local
 - Sizes: small
 - Color: blue
 - Quantity: 10

- Product Description: sample data.
- 5. Click on the **Add Product** button.
- 6. Observe that the product is added successfully without any validation error.

Expected and Actual Results:

- **Expected:** The system should display an error message indicating that the Product ID must be numerical and not allow the product to be added.
- **Actual:** The product is added successfully with an invalid Product ID.

[TXS-32] Non-numerical data in the Product ID field is accepted when adding a new product in the admin panel. Created: 11/Dec/24 Updated: 11/Dec/24

Sprint:	TXS Sprint 1
Defect ID:	31
Severity:	Medium

Description

When attempting to add a product via the "Add Product" feature in the admin panel, the system allows non-numerical data to be entered in the **Product ID** field without validation or error messages. This results in potentially invalid Product IDs being stored in the database.

Steps to Reproduce:

1. Log in to the **admin panel** with the credentials:
 - o Email: kashaf@gmail.com
 - o Password: 12345678.
2. Navigate to the **Products** page from the sidebar.
3. Click on the **Add Product** button.
4. Fill in the following product details:
 - o Product ID: testdataid/#\$@#%
 - o Product Name: Test
 - o Product Price: 200
 - o Category: Jewelry, Eyeliner
 - o Local: local
 - o Sizes: small
 - o Color: blue
 - o Quantity: 10
 - o Product Description: sample data.
5. Click on the **Add Product** button.
6. Observe that the product is added without any validation errors for the non-numerical Product ID.

Expected and Actual Results:

- **Expected:** The system should validate the **Product ID** field and display an error message for non-numerical input.
- **Actual:** The system accepts the non-numerical input and adds the product.

[TXS-31] Runtime error occurs when attempting to add a new product in the admin panel.

Created: 11/Dec/24 Updated: 11/Dec/24

Sprint:	TXS Sprint 1
Defect ID:	30
Severity:	High

Description

When logged into the admin panel and attempting to add a product via the "Add Product" feature on the products page, the application throws an uncaught runtime error with a status code 400. The error originates from an Axios request failing, preventing the addition of the product.

Steps to Reproduce:

1. Log in to the **admin panel** with the credentials:
 - o Email: kashaf@gmail.com
 - o Password: 12345678.
2. Navigate to the **Products** page from the sidebar.
3. Click on the **Add Product** button.
4. Fill in the following product details:
 - o Product ID: 12
 - o Product Name: Test
 - o Product Price: 200
 - o Category: Jewelry, Eyeliner
 - o Local: local
 - o Sizes: small
 - o Color: blue
 - o Quantity: 10
 - o Product Description: sample data.
5. Click on the **Add Product** button.
6. Observe the following runtime error message:

php

```
Uncaught runtime errors: × ERROR Request failed with status code 400 AxiosError:
Request failed with status code 400 at settle
(http://localhost:3000/static/js/bundle.js:93792:12) at XMLHttpRequest.onloadend
(http://localhost:3000/static/js/bundle.js:92443:66) at Axios.request
(http://localhost:3000/static/js/bundle.js:92942:41) at async
ManageProducts.handleSubmit (http://localhost:3000/static/js/bundle.js:753:7)
```

Expected and Actual Results:

- **Expected:** The product should be successfully added to the database, and the admin should receive a confirmation message.
- **Actual:** A runtime error occurs, and the product is not added.

[TXS-30] Orders placed in the customer panel are not displayed in the admin panel's orders page, showing no orders available. Created: 11/Dec/24 Updated: 11/Dec/24

Description

After placing orders successfully in the customer panel, the admin panel fails to display these orders on the orders page. When logged into the admin panel and navigating to the orders section from the sidebar, it incorrectly shows no orders, indicating a potential issue in data synchronization or retrieval between the panels.

Steps to Reproduce:

- Log in to the **customer panel** with the credentials:
 - Email: kashaf1029@gmail.com
 - Password: 12345678.
- Browse products and place an order successfully.
- Log out of the customer panel.
- Log in to the **admin panel** with the credentials:
 - Email: kashaf@gmail.com
 - Password: 12345678.
- Navigate to the **Orders** page from the sidebar.
- Observe that the orders page incorrectly shows no orders.

Expected and Actual Results:

- **Expected:** The admin panel's orders page should accurately display all the orders placed by customers.
- **Actual:** The admin panel's orders page displays no orders, even though orders have been placed in the customer panel.

Description

After verifying the availability of products in the customer panel, the admin panel fails to display any products in the products page. When logged into the admin panel and navigating to the products section from the sidebar, it incorrectly shows no products listed, indicating a potential issue in data synchronization or retrieval between the panels.

Steps to Reproduce:

1. Log in to the **customer panel** with the credentials:
 - o Email: kashaf1029@gmail.com

- Password: 12345678.
- 2. Scroll through the homepage and verify the products listed are visible.
- 3. Log out of the customer panel.
- 4. Log in to the **admin panel** with the credentials:
 - Email: kashaf@gmail.com
 - Password: 12345678.
- 5. Navigate to the **Products** page from the sidebar.
- 6. Observe that the products page incorrectly shows no products available.

Expected and Actual Results:

- **Expected:** The admin panel's products page should accurately display all the products available in the customer panel.
- **Actual:** The admin panel's products page displays no products, even though they are visible in the customer panel.

[TXS-28] [Product reviews added in the customer panel are not reflected in the admin panel dashboard, showing "0 reviews available."](#) Created: 11/Dec/24 Updated: 11/Dec/24

Description

After successfully adding a review for a product in the customer panel, the admin panel dashboard fails to display the review count. Upon logging into the admin panel using valid credentials and accessing the dashboard, the system incorrectly shows "0 reviews available," indicating a synchronization or data retrieval issue between the customer panel and the admin panel.

Steps to Reproduce:

1. Log in to the **customer panel** with the credentials:
 - o Email: kashaf1029@gmail.com
 - o Password: 12345678.
2. Navigate to a product's detailed page and add a review.
3. Verify that the review is visible on the product's page in the customer panel.
4. Log out of the customer panel.
5. Log in to the **admin panel** with the credentials:
 - o Email: kashaf@gmail.com
 - o Password: 12345678.
6. Navigate to the dashboard.
7. Observe that the dashboard displays "0 reviews available" instead of reflecting the actual number of reviews.

Expected and Actual Results:

- **Expected:** The admin panel dashboard should accurately display the total number of reviews submitted for products.
- **Actual:** The admin panel dashboard incorrectly shows "0 reviews available," even though reviews have been added in the customer panel.

Severity:	High

Description

Even though products are present and available in the customer panel, the admin panel dashboard fails to display the correct product count. Upon logging into the admin panel using valid credentials and accessing the dashboard, the system incorrectly shows "0 products available," which suggests a failure in synchronization or data retrieval between the product database and the admin panel.

Steps to Reproduce:

1. Log in to the **customer panel** with the credentials:
 - o Email: kashaf1029@gmail.com
 - o Password: 12345678.
2. Verify that products are available for purchase in the customer panel.
3. Log out of the customer panel.
4. Log in to the **admin panel** with the credentials:
 - o Email: kashaf@gmail.com
 - o Password: 12345678.
5. Navigate to the dashboard.
6. Observe that the dashboard displays "0 products available" instead of reflecting the actual number of products.

Expected and Actual Results:

- **Expected:** The admin panel dashboard should accurately display the number of products available in the system.
- **Actual:** The admin panel dashboard incorrectly shows "0 products available," even though products are present in the customer panel.

[TXS-26] Orders placed by a customer are not reflected in the admin panel, showing "0 orders placed" in the dashboard. Created: 11/Dec/24 Updated: 11/Dec/24

Status:	Open

Sprint:	TXS Sprint 1
Defect ID:	25
Severity:	High

Description

When a user places an order in the customer panel, it should reflect in the admin panel's dashboard for proper order management and tracking. However, after logging into the admin panel using valid credentials and accessing the dashboard, the system incorrectly shows "0 orders placed," even though the order was successfully placed by the customer. This indicates a synchronization issue between the customer panel and the admin panel.

Steps to Reproduce:

- Log in to the **customer panel** with the credentials:
 - Email: kashaf1029@gmail.com
 - Password: 12345678.
- Place an order by adding a product to the cart and proceeding through the checkout process.
- Log out of the customer panel.
- Log in to the **admin panel** with the credentials:
 - Email: kashaf@gmail.com
 - Password: 12345678.
- Navigate to the dashboard.
- Observe that the dashboard displays "0 orders placed" instead of reflecting the customer's order.

Expected and Actual Results:

- Expected:** The admin panel dashboard should display the correct number of orders placed, including the one placed by the customer.
- Actual:** The admin panel dashboard incorrectly shows "0 orders placed," even though an order was successfully placed in the customer panel.

[TXS-25] [The profile page allows saving empty or invalid data in the address field, displaying a success message instead of showing an error.](#) Created: 10/Dec/24 Updated: 10/Dec/24

Description

When a user logs into their account and navigates to the profile page, clicking the "Edit" button beside the address field reveals "Save" and "Cancel" buttons. If the user leaves the address field empty or enters invalid data (such as "%\$%" or non-address text), and clicks "Save," the system accepts the invalid input, updates the address, and displays a confirmation message: "Address updated successfully!" This behavior is not in line with expected address validation, as the field should only accept valid address formats.

Steps to Reproduce:

- Log in to the website using the credentials:
 - Email: kashaf1029@gmail.com
 - Password: 12345678.
- Click on the "Account" button in the navigation bar.
- On the profile page, click the "Edit" button next to the address field.
- Enter invalid or empty data (e.g., special characters or numbers) into the address field.
- Click the "Save" button.
- Observe that the system accepts the invalid or empty data and displays a success message.

Expected and Actual Results:

- **Expected:** The system should display a validation error, such as "Please enter a valid address," and should not allow saving invalid or empty data in the address field.
- **Actual:** The system accepts the invalid or empty submission and displays a success message: "Address updated successfully!"

4. Do not enter any value in the address field and click the "Save" button.
5. Observe that the system accepts the empty value and displays a success message.

Expected and Actual Results:

- **Expected:** The system should display a validation error, such as "Address cannot be empty," and should not allow saving an empty address.

- **Actual:** The system accepts the empty submission and displays a success message: "Address updated successfully!"

[TXS-18] [The profile page allows saving an empty username, displaying a success message instead of showing an error.](#) Created: 10/Dec/24 Updated: 10/Dec/24

Sprint:	TXS Sprint 1
Defect ID:	17
Severity:	Medium

Description

When a user logs into their account and navigates to the profile page, clicking the "Edit" button beside the username reveals "Save" and "Cancel" buttons. If the user clicks "Save" without entering any value in the username field, the system accepts the empty submission, updates the username, and displays a confirmation message: "Username updated successfully!" This behavior contradicts the expected validation checks, as the username field should not accept empty values.

Steps to Reproduce:

1. Log in to the website using the credentials:
 - o Email: kashaf1029@gmail.com
 - o Password: 12345678.
2. Click on the "Account" button in the navigation bar.
3. On the profile page, click the "Edit" button next to the username field.

4. Do not enter any value in the username field and click the "Save" button.
5. Observe that the system accepts the empty value and displays a success message.

Expected and Actual Results:

- **Expected:** The system should display a validation error, such as "Username cannot be empty," and should not allow saving an empty username.
- **Actual:** The system accepts the empty submission and displays a success message: "Username updated successfully!"

[TXS-17] [The Orders page displays "No Order Placed" even after successfully placing an order.](#) Created: 10/Dec/24 Updated: 10/Dec/24

Description

When a user places an order after adding products to the cart and completing the checkout process, the system fails to update the Orders page. Upon navigating to the Orders page via the navigation bar, the page incorrectly displays "No Order Placed," leading to confusion about the order status.

Steps to Reproduce:

1. Log in to the website.
2. Add a product to the cart and proceed to checkout.
3. Complete the checkout process to place an order.
4. Navigate to the Orders page via the navigation bar.
5. Observe that the page incorrectly displays "No Order Placed" despite successfully placing an order.

Expected and Actual Results:

- **Expected:** After placing an order, the Orders page should display the order details, including items, status, and any associated information.
- **Actual:** The Orders page displays "No Order Placed," even though an order has been placed.

[TXS-15] [The cart page does not allow the removal of products by clicking the bin button, and it fails to provide any notification or error message explaining why the removal is not possible.](#) Created: 10/Dec/24 Updated: 10/Dec/24

Description

When a user logs in, navigates to the homepage, selects "View Detail" on a product, adds it to the cart, and then accesses the cart page, the system displays all the items in the cart. However, when attempting to remove a product using the bin button next to the product, the system does not remove the item and fails to provide any feedback or error message to the user.

Expected and Actual Results:

- **Expected:** The system should allow users to remove items from the cart using the bin button or provide a clear error message explaining why the item cannot be removed.
- **Actual:** The system does not remove the item from the cart and fails to show any notification or error message.

Steps to Reproduce:

1. Log in to the website.
2. Scroll down to the homepage and select "View Detail" on any product.
3. On the product detail page, click the "Add to Cart" button.
4. Navigate to the cart page by selecting "Cart" in the navigation bar.
5. Attempt to remove the product from the cart by clicking the bin button next to the product.
6. Observe that the product is not removed, and no notification or error message is displayed.

Description

When a user logs in, navigates to the homepage, selects "View Detail" on a product, adds it to the cart, and then goes to the cart page, the cart successfully displays all the items. However, the product images are missing, leading to an incomplete user experience. Product images are essential for users to identify items in their cart.

Defect Report

Defect ID: 14

Summary:

The cart page displays all items added to the cart, but the product images are missing.

Description:

When a user logs in, navigates to the homepage, selects "View Detail" on a product, adds it to the cart, and then goes to the cart page, the cart successfully displays all the items. However, the product images are missing, leading to an incomplete user experience. Product images are essential for users to identify items in their cart.

Steps to Reproduce:

1. Log in to the website.
2. Scroll down to the homepage and select "View Detail" on any product.
3. On the product detail page, click the "Add to Cart" button.
4. Navigate to the cart page by selecting "Cart" in the navigation bar.
5. Observe that the cart page displays all the items added to the cart, but their images are missing.

Expected and Actual Results:

- **Expected:** The cart page should display all items along with their respective product images to provide a complete view of the cart contents.
- **Actual:** The cart page displays all items but does not show the product images.

[TXS-13] [The system allows adding a product to the cart without selecting required dropdown menu filters such as color or size on the product detail page.](#) Created: 10/Dec/24 Updated:

Defect ID:	13
Severity:	Medium

Description

When a user navigates to a product detail page and attempts to add a product to the cart without selecting required dropdown menu filters (e.g., color, size), the system still allows the item to be added to the cart. This behavior bypasses mandatory user inputs and can result in incomplete or incorrect orders.

Steps to Reproduce:

1. Open the website and scroll down to the homepage.
2. Select the "View Detail" button on any product.
3. On the detailed product page, do not select any required dropdown menu filters such as color or size.
4. Click on the "Add to Cart" button.
5. Observe that the product is added to the cart without prompting the user to select the required options.

Expected and Actual Results:

- **Expected:** The system should prompt the user to select all required dropdown menu filters (e.g., color, size) before allowing the item to be added to the cart.
- **Actual:** The system allows the product to be added to the cart without ensuring that the required dropdown menu filters are selected.

[TXS-12] [Selecting a product in a category page does not navigate to the product order page or provide an option to add the product to the cart.](#) Created: 10/Dec/24 Updated: 10/Dec/24

Severity:	High

Description

When a user selects a category from the homepage, the system correctly displays the products of that category. However, clicking on a product does not navigate to the product detail/order page, nor is there an option to add the product to the cart. This affects the core functionality of the e-commerce platform, preventing users from placing orders for products.

Steps to Reproduce:

1. Open the website and scroll down to the homepage.
2. Select a category from the available options.
3. Observe that the system displays products related to the selected category.
4. Click on any product displayed in the category page.
5. Observe that the system does not navigate to a page where the product can be ordered, nor is there any button to add the product to the cart.

Expected and Actual Results:

- **Expected:** Clicking on a product should navigate the user to a detailed product page with an "Add to Cart" button to facilitate the ordering process.

- **Actual:** Clicking on a product does not navigate to a product detail/order page, and there is no option to add the product to the cart.

[TXS-11] [The "Become a Seller" button is displayed in the customer panel, which should not be visible to customers on an e-commerce website.](#) Created: 10/Dec/24 Updated: 10/Dec/24

Sprint:	TXS Sprint 1
Defect ID:	11
Severity:	Medium

Description

When logging in with customer credentials (email: kashaf1029@gmail.com, password: 12345678), the system takes the user to the customer panel. However, the "Become a Seller" button is still visible, which should only be displayed to users with seller privileges. This is a functionality issue where the customer panel incorrectly shows a button intended for sellers only.

Steps to Reproduce:

1. Open the website and navigate to the login page.
2. Enter the following credentials:
 - **Email:** kashaf1029@gmail.com
 - **Password:** 12345678
3. Click on the "Login" button.

4. Observe that after logging in, the user is taken to the customer panel, but the "Become a Seller" button is still visible.

Expected and Actual Results:

- **Expected:** The "Become a Seller" button should not be visible to customers in the customer panel. Only sellers should have access to this option.
- **Actual:** The "Become a Seller" button is incorrectly displayed to customers after logging in.

[TXS-10] [The phone number field allows registration with an invalid phone number \("1"\) without showing any validation error.](#) Created: 10/Dec/24 Updated: 10/Dec/24

Severity:	High

Description

When a user enters an invalid phone number, such as "1", during registration, the system allows them to proceed without displaying any validation error. There are no checks implemented on the phone number field to ensure it follows a valid format, which could result in incorrect or incomplete contact information being submitted.

Steps to Reproduce:

1. Open the website and navigate to the registration page.
2. Enter the following sample data:
 - **Username:** Sample data
 - **Email:** Sampledata4@gmail.com
 - **Password:** 12345678
 - **Address:** Sample Data
 - **Phone number:** 1 (invalid phone number)
3. Click on the "Register" button.
4. Observe that the registration proceeds without displaying any error related to the invalid phone number.

Expected and Actual Results:

- **Expected:** The system should validate the phone number format (e.g., minimum length, numeric values) and show an error message when the phone number is invalid.
- **Actual:** The system allows the registration to proceed without any error or validation for the invalid phone number.

[TXS-9] [The password field allows registration with a weak password \("1"\) without showing any validation error.](#) Created: 10/Dec/24 Updated: 10/Dec/24

Severity:	High

Description

When a user enters a weak password, such as "1", during registration, the system allows them to register without displaying an error message. There is no validation in place to enforce strong password requirements, which could lead to security vulnerabilities.

Steps to Reproduce:

1. Open the website and navigate to the registration page.
2. Enter the following sample data:
 - **Username:** Sample data
 - **Email:** Sampledata3@gmail.com
 - **Password:** 1 (weak password)
 - **Address:** Sample Data
 - **Phone number:** 03123456789
3. Click on the "Register" button.
4. Observe that the registration proceeds without displaying any error related to the weak password.

Expected and Actual Results:

- **Expected:** The system should enforce strong password requirements (e.g., minimum length, mix of characters) and show an error message when the password is weak, such as "1".
- **Actual:** The system allows the registration to proceed without any error or validation for the weak password.

Severity:	High

Description

When a user enters an incorrect email format (e.g., "Sampledata@g.c") in the email field during registration, the system allows them to register without displaying any validation error. This violates proper input validation rules and can lead to incorrect or incomplete user data being submitted.

Steps to Reproduce:

1. Open the website and navigate to the registration page.
2. Enter the following sample data:
 - **Username:** Sample data
 - **Email:** Sampledata2@g.c (invalid format)
 - **Password:** 12345678
 - **Address:** Sample Data
 - **Phone number:** 0312345678
3. Click on the "Register" button.
4. Observe that the registration proceeds without showing any error related to the invalid email format.

Expected and Actual Results:

- **Expected:** The system should display an error message indicating that the email format is incorrect when the user enters an invalid email format.
- **Actual:** The system does not display any error message and allows the user to register with an invalid email format.

[TXS-7] [The "Help Center" option in the notification bar redirects users to the login page instead of allowing access without logging in or signing up.](#) Created: 10/Dec/24 Updated: 10/Dec/24

Description

The website is designed to allow users to access the Help Center without requiring login or signup. However, when users click the "Help Center" option in the notification bar, they are redirected to the login page instead of being granted access to the Help Center. This violates the expected functionality and limits access to assistance for new or unauthenticated users.

Steps to Reproduce:

1. Open the website in a web browser without logging in or signing up.
2. Locate the "Help Center" option in the notification bar.
3. Click on the "Help Center" option.
4. Observe that the website redirects to the login page instead of opening the Help Center.

Expected and Actual Results:

- **Expected:** Clicking on the "Help Center" option should take users directly to the Help Center page, even if they are not logged in or signed up.
- **Actual:** The "Help Center" option redirects users to the login page, preventing access to assistance for unauthenticated users.

[TXS-6] [The product details page does not display a notification explaining why users cannot submit a review if they are not logged in.](#) Created: 10/Dec/24 Updated: 10/Dec/24

Description

When users navigate to the product details page by selecting the "View Detail" button on any product and attempt to add a review without logging in, the review is not submitted. However, there is no notification or message displayed to inform the user that login is required to submit a review. This creates confusion and a poor user experience.

Steps to Reproduce:

1. Open the website in a web browser.
2. Scroll down to the homepage's product section.
3. Click the "View Detail" button for any product.
4. On the product details page, attempt to add a review without logging in.
5. Observe that the review is not submitted, and no notification is shown to explain the issue.

Expected and Actual Results:

- **Expected:** When users attempt to submit a review without logging in, a notification or message should be displayed, explaining that login is required to submit a review.
- **Actual:** The review is not submitted, and no notification is shown to explain why the action is not allowed.

[TXS-5] [The product image is not displayed on the product details page when the "View Detail" button is selected for any product on the homepage.](#) Created: 10/Dec/24 Updated: 10/Dec/24
