

Use Case 1

- Use Case ID: EMS-01
- Use Case Name: Automated Employee Onboarding
- Scope: Employee Management System
- Level: User-goal level
- Primary Actor: HR Professionals
- Stakeholders and Interests:
 - HR Professionals: Seek efficient onboarding.
 - New Employees: Desire a smooth integration into the organization.
 - IT Department: Ensures system supports onboarding processes.
- Preconditions: EMS is operational and accessible.
- Success Guarantee (Post Conditions): New employee is successfully onboarded with all relevant information stored in the system.
- Main Success Scenario: HR Professional initiates the onboarding process in the EMS, which guides them through necessary steps like document submission and employee data entry.
- Extensions:
 - The new employee does not provide all required information.
 - System outage during the onboarding process.
- Special Requirements: Integration with document management systems.
- Technology and Data Variations List: Can be performed on various devices (PCs, tablets).
- Frequency of Occurrence: Regularly, as new employees are hired.
- Open Issues: Handling of different onboarding requirements for various job roles.

Use Case 2

- Use Case ID: EMS-02
- Use Case Name: Performance Evaluation Process
- Scope: Employee Management System
- Level: User-goal level
- Primary Actor: HR Managers
- Stakeholders and Interests:
 - HR Managers: Need reliable tools for performance assessment.
 - Employees: Want fair and transparent evaluations.

- Senior Management: Interested in performance metrics for decision-making.
- Preconditions: EMS contains up-to-date employee performance data.
- Success Guarantee (Post Conditions): Comprehensive performance report generated for each employee.
- Main Success Scenario: HR Manager accesses the performance evaluation module, completes evaluations based on predefined criteria, and submits reports.
- Extensions:
 - Discrepancies in employee performance data.
 - Manager requests additional performance feedback from other team members.
- Special Requirements: Real-time analytics capabilities.
- Technology and Data Variations List: Use on various devices and integration with analytics tools.
- Frequency of Occurrence: Typically conducted annually or bi-annually.
- Open Issues: Customizing evaluation criteria for different departments.

Use Case 3

- Use Case ID: EMS-03
- Use Case Name: Attendance and Leave Management
- Scope: Employee Management System
- Level: User-goal level
- Primary Actor: HR Professionals
- Stakeholders and Interests:
 - HR Professionals: Require an efficient system to manage attendance and leave.
 - Employees: Need a straightforward way to report attendance and request leave.
- Preconditions: EMS is operational with updated employee schedules.
- Success Guarantee (Post Conditions): Accurate tracking and management of employee attendance and leave.
- Main Success Scenario: HR professional monitors attendance data, approves leave requests, and updates leave balances.
- Extensions:
 - Employee disputes recorded attendance or leave data.
 - System fails to update leave balance correctly.
- Special Requirements: Integration with time-tracking hardware.

- Technology and Data Variations List: Mobile app for remote check-ins.
- Frequency of Occurrence: Daily for attendance, as needed for leave requests.
- Open Issues: Handling different leave policies for various regions or job types.

Use Case 4

- Use Case ID: EMS-04
- Use Case Name: Payroll Processing and Management
- Scope: Employee Management System
- Level: User-goal level
- Primary Actor: Payroll Administrators
- Stakeholders and Interests:
 - Payroll Administrators: Interested in accurate and efficient payroll processing.
 - Employees: Expect timely and correct salary payments.
- Preconditions: EMS has current employee work hours and pay rate data.
- Success Guarantee (Post Conditions): Employees are paid correctly and on time.
- Main Success Scenario: Payroll administrator inputs work hours, calculates pay, applies deductions/bonuses, and initiates payment process.
- Extensions:
 - Discrepancies in work hours reported.
 - System errors during payroll calculations.
- Special Requirements: Secure handling of financial data.
- Technology and Data Variations List: Integration with banking systems for direct deposit.
- Frequency of Occurrence: Monthly or bi-weekly, depending on the pay cycle.
- Open Issues: Adapting to different tax laws in various jurisdictions.

Use Case 5

- ~~***###~~ Use Case 5
- Use Case ID: EMS-05
- Use Case Name: Compliance Management and Reporting
- Scope: Employee Management System
- Level: User-goal level
- Primary Actor: Legal & Compliance Officers
- Stakeholders and Interests:

- Legal & Compliance Officers: Need to ensure organizational HR practices are compliant with laws.
- HR Managers: Require updates on changing legal standards.
- Auditors: Interested in verifying compliance.
- Preconditions: EMS is updated with current legal standards and regulations.
- Success Guarantee (Post Conditions): Compliance with all relevant HR-related legal standards and successful audit reports.
- Main Success Scenario: Compliance officer uses EMS to monitor and ensure all HR processes are in line with legal requirements, generating compliance reports as needed.
- Extensions:
 - Legal standards change, requiring updates in the system.
 - Compliance audit identifies areas of non-compliance.
- Special Requirements: Dynamic updating of legal standards and regulations in the system.
- Technology and Data Variations List: Compatibility with legal databases for automatic updates.
- Frequency of Occurrence: Ongoing monitoring with periodic in-depth checks.
- Open Issues: Adapting to international legal standards for multinational corporations.
-

Use Case 6:

Use Case ID: EMS-06

Use Case Name: Manage Employee Benefits

Scope: EMS

Level: Supporting task

Primary Actor: HR Manager, Employees

Stakeholders and Interests:

- Employees: Want clear benefits communication and seamless enrollment.
- HR Manager: Wants to efficiently administer benefits compliances.
- Organization: Relies on benefits to attract and retain top talent.

Preconditions: Open enrollment period is active.

Success Guarantee: Employee benefit selection is recorded accurately.

Main Success Scenario:

- HR Manager defines available plans and their details
- System notifies employees to enroll via portal during open period
- Employees review plans, select options and dependents

- HR manager reviews selections, may request edits
- Benefit selections are recorded and loaded for payroll

Extensions:

- Plan limitations: System alerts required documents or eligibility
- Enrollment errors: Employee corrects and resubmits

Special Requirements: Carrier integrations, eligibility rules

Frequency: Annual open enrollment period

Open Issues: Streamlining plan changes outside open period

Use Case 7:

Use Case ID: EMS-07

Use Case Name: Manage Employee Termination

Scope: EMS

Level: Primary task

Primary Actor: HR Manager

Stakeholders and Interests:

- HR Manager: Wants consistent offboarding process.
- Terminated Employee: Expects respect, severance as applicable.
- Organization: Relies on closure and compliance during separations.

Preconditions: Termination notice has been issued.

Success Guarantee: Employee offboarding is completed.

Main Success Scenario:

- HR Manager logs termination details (reason, date)
- System deactivates login, cancels benefits
- Manager processes final pay, collects assets
- Employee signs exit documents via portal
- System archives employee record

Extensions:

- Assets missing: Manager issues reminder, follows up
- Legal/HR review: Offboarding is put on hold for approval

Special Requirements: Auditable revision history

Frequency: Rare-Occasional

Open Issues: Streamlining separation classes

Use Case 8:

Use Case ID: EMS-08

Use Case Name: Manage Employee Training & Development

Scope: EMS

Level: Supporting task

Primary Actor: HR Manager, Employees

Stakeholders and Interests:

- Employees: Want opportunities to learn and advance careers.
- HR Manager: Wants to optimize human capital effectiveness.
- Organization: Relies on skills development for productivity, retention.

Preconditions: Learning programs/courses defined by L&D team.

Success Guarantee: Employee completes assigned training.

Main Success Scenario:

- Manager assigns training from catalog to targeted employees
- System schedules and notifies employees of classes
- Employees track progress, provide feedback in portal
- 4. HR approves credits on completion

Extensions:

- Rescheduling: Employees request changes, subject to approvals
- New program: HR designs custom training, system records progress

Special Requirements: Content authoring, competency tracking

Frequency: Ongoing throughout employment

Open Issues: Leveraging LMS capabilities for varied content

Use Case 9:

Use Case ID: EMS-09

Use Case Name: Manage Employee Scheduling

Scope: EMS

Level: Primary task

Primary Actor: HR Manager, Employees

Stakeholders and Interests:

- Employees: Want visibility to work schedules to plan time.
- HR Manager: Needs to efficiently create work schedules.
- Organization: Relies on consistent staffing to run operations smoothly.

Preconditions: Employee and department profiles are defined.

Success Guarantee: Employee schedules are generated and published.

Main Success Scenario:

1. Manager defines scheduling criteria (shift patterns, hours of work)
2. Manager creates and publishes schedules 3-6 weeks in advance
3. System notifies employees of work allocation
4. Employees request swaps/changes via portal
5. Manager reviews, approves/denies changes
6. Final schedules are published and enforced

Extensions:

- Shift change: Manager makes one-time or ongoing alterations
- Leave use: System auto-adjusts published schedules

Special Requirements: Rules engine, swap board, open shift bidding

Frequency: Bi-weekly/Monthly

Open Issues: Integrations for time-off approvals

Use Case 10:

Use Case ID: EMS-10

Use Case Name: Manage Payroll Process

Scope: EMS

Level: Primary task

Primary Actor: HR Manager

Stakeholders and Interests:

- Employees: Expect accurate and timely compensation.
- HR Manager: Responsible for payroll administrative burden.
- Organization: Relies on efficient payroll for budgeting, compliance.

Preconditions: Relevant pay period has ended with timesheet approval.

Success Guarantee: Payroll is processed, paid and recorded accurately.

Main Success Scenario:

1. System calculates paychecks factoring salaries, allowances, deductions
2. Manager verifies and submits payroll to finance for payment
3. Payroll is disbursed to employees on scheduled pay date
4. Reports are generated for accounting and tax purposes

Extensions:

- Pay adjustments: Manager applies changes for next pay cycle
- Corrections: Manager issues supplemental paycheck

Special Requirements: Tax tables integration, pay advice portal

Frequency: Bi-weekly/Monthly

Open Issues: Addressing international payroll regulations.

Use Case 11:

- Use Case ID: EMS-11
- Use Case Name: Employee Performance Improvement Plans
- Scope: EMS
- Level: Supporting task
- Primary Actor: HR Manager, Supervisors
- Stakeholders and Interests:
 - 1) Employees: Seek guidance and support to improve performance.
 - 2) HR Manager: Aims to enhance employee productivity and job satisfaction.
 - 3) Organization: Requires a structured approach to address performance issues.
- Preconditions: Performance issues identified through evaluations or feedback.
- Success Guarantee: Employee performance shows measurable improvement.
- Main Success Scenario:
 - 1) HR Manager or Supervisor identifies performance deficiencies.
 - 2) Employee and supervisor collaborate to create a performance improvement plan .
 - 3) PIP details goals, expectations, and support mechanisms.
 - 4) Regular progress meetings are scheduled to review and adjust the plan as needed.
- Extensions:
 - 1) Employee disputes performance evaluation triggering PIP.
 - 2) Lack of resources or training impedes progress.
- Special Requirements: Performance tracking tools, coaching resources.
- Frequency: As needed based on performance assessments.
- Open Issues: Balancing accountability with employee support.

Use Case 12:

- Use Case ID: EMS-12
- Use Case Name: Employee Recognition and Rewards
- Scope: EMS
- Level: Supporting task
- Primary Actor: HR Manager, Supervisors
- Stakeholders and Interests:
 - 1) Employees: Value recognition for their contributions.
 - 2) HR Manager: Seeks to foster a positive work culture and motivate employees.

- 3) Organization: Aims to retain talent and encourage high performance.
- Preconditions: Employee achievements or milestones warrant recognition.
- Success Guarantee: Employees feel appreciated and motivated to continue performing well.
- Main Success Scenario:
 1. Supervisors or colleagues nominate employees for recognition.
 2. HR Manager approves nominations and selects appropriate rewards or recognition.
 3. Recognition is publicly announced or awarded during team meetings or events.
 4. Records of recognition are maintained in the EMS for future reference.
- Extensions:
 1. Employee declines public recognition.
 2. Lack of budget for tangible rewards.
- Special Requirements: Reward catalog management, peer-to-peer recognition features.
- Frequency: Regularly to reinforce positive behavior and achievements.
- Open Issues: Ensuring fairness and inclusivity in recognition practices.

Use Case 13:

- Use Case ID: EMS-13
- Use Case Name: Employee Feedback and Surveys
- Scope: EMS
- Level: Supporting task
- Primary Actor: HR Manager, Employees
- Stakeholders and Interests:
 1. Employees: Seek opportunities to provide feedback and voice concerns.
 2. HR Manager: Aims to gather insights for improving organizational processes and culture.
 3. Organization: Values employee input for continuous improvement.
- Preconditions: Periodic feedback sessions or survey cycles are scheduled.
- Success Guarantee: Actionable insights are derived from employee feedback.
- Main Success Scenario:
 1. HR Manager designs feedback surveys or establishes feedback channels.
 2. Employees provide feedback anonymously or openly through designated platforms.
 3. HR Manager analyzes feedback data to identify trends or areas for improvement.
 4. Action plans are developed and implemented based on feedback findings.

- Extensions:
 1. Employee concerns require immediate attention outside scheduled surveys.
 2. Low participation rates in feedback initiatives.
 3. Special Requirements: Survey creation tools, anonymity features, feedback tracking.
- Frequency: Regular intervals or triggered by organizational events.
- Open Issues: Ensuring confidentiality and trust in feedback processes.

Use Case 14:

- Use Case ID: EMS-14
- Use Case Name: Employee Wellness Programs
- Scope: EMS
- Level: Supporting task
- Primary Actor: HR Manager, Wellness Coordinators
- Stakeholders and Interests:
 1. Employees: Value access to resources and initiatives promoting physical and mental well-being.
 2. HR Manager: Aims to improve employee health, reduce absenteeism, and enhance productivity.
 3. Organization: Invests in employee wellness to foster a healthy workforce.
- Preconditions: Wellness program initiatives and resources are available.
- Success Guarantee: Improved overall employee well-being and engagement.
- Main Success Scenario:
 1. HR Manager communicates and promotes wellness programs to employees.
 2. Employees enroll or participate in wellness activities such as fitness challenges, mindfulness sessions, or health screenings.
 3. Wellness coordinators monitor participation and engagement metrics.
 4. Feedback is collected to iterate and improve wellness program offerings.
- Extensions:
 1. Low participation rates in wellness activities.
 2. Employee health concerns prompt adjustments to program offerings.
- Special Requirements: Wellness program platform integration, health tracking features.
- Frequency: Ongoing with periodic wellness events or challenges.
- Open Issues: Balancing voluntary participation with organizational health goals.

Use Case 15:

- Use Case ID: EMS-15
- Use Case Name: Diversity and Inclusion Initiatives
- Scope: EMS
- Level: Supporting task
- Primary Actor: HR Manager, Diversity and Inclusion Officers
- Stakeholders and Interests:
 1. Employees: Value a diverse and inclusive workplace culture.
 2. HR Manager: Aims to promote diversity, equity, and inclusion (DEI) within the organization.
 3. Organization: Recognizes the business benefits of diverse perspectives and inclusive practices.
- Preconditions: Diversity and inclusion initiatives are prioritized and supported by leadership.
- Success Guarantee: Increased representation and engagement of diverse talent.
- Main Success Scenario:
 1. HR Manager and Diversity Officers develop DEI strategies and initiatives.
 2. Diversity training and education programs are rolled out to all employees.
 3. Recruitment practices prioritize diversity sourcing and inclusive hiring processes.
 4. Employee resource groups (ERGs) are established to support underrepresented communities.
- Extensions:
 1. Resistance or lack of awareness about DEI initiatives among employees.
 2. DEI metrics indicate disparities that require targeted interventions.
- Special Requirements: DEI training modules, diversity recruiting tools, ERG management.
- Frequency: Ongoing with periodic reviews and updates to DEI initiatives.
- Open Issues: Measuring and tracking the impact of DEI efforts on organizational culture and performance.

Use Case 16:

Use Case ID: EMS-016

Use Case Name: Generate HR Report

Scope: EMS

Level: Primary task

Primary Actor: HR Manager

Stakeholders and Interests:

- HR Manager: Aims to generate accurate and insightful reports for decision-making.
- Executives: Need reports for strategic planning and resource allocation.

Preconditions: HR database contains up-to-date and accurate employee data.

Success Guarantee: Accurate reports on HR metrics are generated.

Main Success Scenario:

1. HR manager selects the type of report to generate.
2. System retrieves relevant data from the HR database.
3. System processes the data and calculates the requested metrics.
4. The HR manager verifies the report's relevancy and correctness.
5. HR manager exports the report in the desired format (e.g., PDF, Excel).
6. System archives the generated report for future reference.

Extensions:

- 1) HR manager find errors in the data and notify the relevant staff so that they may be fixed.
- 2) System notifies the HR manager that more data must be entered in order to provide correct reports.
- 3) HR manager change report settings to suitably customize the analysis.

Special Requirements: Data security: Only authorized people have access to sensitive HR data.

Technology and Data Variations List:

- Integration with HR database
- Compatibility with reporting tools
- Support for different data formats and structures

Frequency: Weekly, Monthly

Open issue: Optimization of report generation process for efficiency, handling large datasets efficiently

Use Case 17:

Use Case ID: EMS-017

Use Case Name: Manage Employee Documents

Scope: EMS

Level: Primary task

Primary Actor: HR Administrator

Stakeholders and Interests:

HR Administrator: to effectively store and arrange personnel records for simple administration and retrieval.

Employees: Expect their documents to be securely stored and easily accessible when needed.

Managers: Demand access to personnel records in order to assess performance and make decisions.

Preconditions: System is accessible and functional

Success Guarantee: Employee documents are securely stored and easily retrievable.

Main Success Scenario:

1. The HR Administrator chooses to upload a new file.
2. System asks the HR Administrator to enter the employee's data and the kind of document
3. The HR Administrator uploads the file and adds any necessary metadata (such as the employee's name and the document's date).
4. System categorizes and organizes the document based on its type and employee details.
5. The HR Administrator confirms that the material was successfully uploaded and organized.
6. System alerts pertinent parties (such as managers and staff) of the new document's availability.

Extensions:

- 1) System notifies the HR administrator of upload issues and requests that they take appropriate action.
- 2) HR Administrator searches for and retrieves specific documents based on employee or document type criteria.
- 3) When necessary, the HR Administrator modifies or updates the document's metadata.

Special Requirements: Data security: Establish and uphold access rights to guarantee that employee papers may only be viewed or altered by authorized persons.

Technology and Data Variations List:

Support for various document formats (e.g., PDF, Word, Excel) and sizes

Frequency: Regular - As documents are added or updated for employees.

Open issue: Scalability to accommodate a growing volume of documents.

Use Case 18:

Use Case ID: EMS-018

Use Case Name: Goal Setting and Tracking System

Scope: EMS

Level: Secondary task

Primary Actor: HR Manager

Stakeholders and Interests:

HR Manager: Aims to create a productive and high-performing workforce by implementing an efficient system for defining, tracking, and appraising employee goals.

Employees: Expect clear, achievable goals that align with organizational objectives and provide direction for their work.

Preconditions: User has access to System

Success Guarantee: Successful implementation of a goal setting and tracking system that improves employee performance and aligns with organizational objectives.

Main Success Scenario:

1. HR manager allows system to send notifications to employees.
2. System prompts employees to input their goals and associated action plans, including target deadlines and progress checkpoints.
3. Managers review and approve employee goals, providing feedback and alignment with departmental objectives as needed.
4. Throughout the performance period, employees update their progress on assigned goals, documenting achievements, challenges, and any necessary adjustments.
5. System generates regular progress reports and alerts managers and employees of approaching deadlines or deviations from established targets.
6. At scheduled intervals (e.g., quarterly or annually), managers conduct performance reviews with employees to assess goal attainment, provide feedback, and identify areas for development.
7. HR Manager evaluates the overall effectiveness of the goal setting and tracking system through feedback surveys, performance metrics, and organizational outcomes.

Extensions:

- 1) IT support team resolves any technical issues or glitches in the goal setting and tracking system to minimize disruptions.

Special Requirements: Integration with performance management systems to link goal achievement with compensation and rewards.

Technology and Data Variations List:

- Compatibility with various devices and operating systems for accessibility across different platforms.
- Integration with project management tools or collaboration platforms to streamline goal tracking and communication.

Frequency: Ongoing - Goals are set, monitored, and reviewed periodically throughout the performance cycle.

Open issue: Addressing potential resistance or skepticism from employees or managers unfamiliar with formal goal setting practices.

Use Case 19:

Use Case ID: EMS-019

Use Case Name: Submit Leave Request

Scope: EMS

Level: Primary task

Primary Actor: Employee

Stakeholders and Interests:

- Employee: Aims to efficiently submit leave requests and manage personal information.
- HR Department: Requires accurate and timely leave requests for scheduling and payroll purposes.

Preconditions: Employee is authenticated and logged into the Employee Self-Service Portal.

Success Guarantee: Leave request is successfully submitted and recorded in the HR system..

Main Success Scenario:

1. Employee navigates to the "Leave Requests" section of the Employee Self-Service Portal.
2. Employee selects the type of leave (e.g., annual leave, sick leave) and specifies the start and end dates.
3. Employee provides a brief description or reason for the leave request.
4. Employee reviews the leave request details for accuracy.
5. Employee submits the leave request.
6. System validates the leave request and checks for any conflicts with existing leave schedules.
7. If no conflicts are found, the system records the leave request in the HR database.
8. Employee receives a confirmation message indicating that the leave request has been successfully submitted.

Extensions:

- 1) - Leave request conflicts: System notifies the employee of any conflicts with existing leave schedules and prompts them to adjust the dates or seek approval from a supervisor.
- 2) - Insufficient leave balance: System alerts the employee if they do not have sufficient leave balance and advises them to consult HR or their supervisor for options.

Special Requirements: System efficiency, reliability

Technology and Data Variations List:

- Integration with HR database to retrieve employee information and leave balances.
- Secure authentication and access control mechanisms to ensure only authorized employees can submit leave requests.

Frequency: Regular - Depends on employee's need for leave, could be daily or periodically.

Open issue:- Ensuring user-friendly interface for seamless leave request submission.
- Handling leave request approvals and notifications efficiently.

Use Case 20:

Use Case ID: EMS-020

Use Case Name: Customize Workflows and Approval Processes

Scope: EMS

Level: Secondary task

Primary Actor: Workflow Administrator

Stakeholders and Interests:

- Workflow Administrator: Aims to design and configure customizable workflows and approval processes that align with organizational requirements.
- Department Managers: Require workflows tailored to their specific team's needs for efficient task management and decision-making.
- Employees: Expect streamlined processes that facilitate their work and ensure timely approvals.

Preconditions: System is accessible and configurable.

Success Guarantee: Customized workflows and approval processes are successfully implemented, improving efficiency and alignment with organizational requirements.

Main Success Scenario:

1. Workflow Administrator selects the option to customize workflows.
2. System provides a user-friendly interface for designing workflows, including defining tasks, participants, and approval steps.
3. Workflow Administrator identifies the specific workflow or approval process to customize based on organizational requirements.
4. System allows for the addition, modification, or removal of workflow steps as needed to align with the desired process.
5. Workflow Administrator configures rules and conditions for task assignments, notifications, and escalations to ensure smooth workflow execution.
6. System validates the configured workflow for consistency and completeness before implementation.
7. Workflow Administrator activates the customized workflow for use by relevant departments or teams.
8. Department Managers and employees utilize the customized workflows to manage tasks and obtain necessary approvals efficiently.

Extensions:

- 1) Workflow Administrator gathers feedback from users and iterates on the customized workflows to address any issues or improvements.
- 2) System performs automated checks to ensure that customized workflows adhere to regulatory and compliance requirements.
- 3) Workflow Administrator quickly adapts customized workflows to accommodate changes in organizational processes or priorities.

Special Requirements:- Scalability: Design workflows that can scale with the organization's growth and evolving requirements.

Role-Based Access Control: Ensure that access to specific workflows and approval processes is restricted based on user roles and permissions.

Technology and Data Variations List:

- Support for various workflow types, including sequential, parallel, and conditional workflows.
 - Compatibility with mobile devices for on-the-go access to workflows and approvals
- Frequency:** Ongoing - As organizational processes evolve or new requirements emerge.
- Open issue:** - Balancing flexibility with standardization to ensure that customized workflows meet organizational goals while maintaining consistency and efficiency.
- Providing adequate training and support to users to effectively utilize and navigate customized workflows.
